Through our platform you can create different projects. Our team will give you full support for successful realization. Every project created in our system is considered part of ALLBI, the goal is for all of us to form a large team of people to work on their projects.

The following Crypto Projects have been created in our system at the moment:

1. [https://www.onlexpa.com/](https://www.onlexpa.com/) - One of the largest online training sites in Europe! onLEXpa uses its own onLEXpa Tokens for online payments. When a customer pays a course with onLEXpa Tokens, he gets big discount! Our goal is to make education around the world more and more accessible through Blockchain Technology!

2. [https://www.librefree.allbestico.com/](https://www.librefree.allbestico.com/) - LibreFreelencer (LibreF Token) Here every person offers themselves and their own community skills. In this system you can offer legal services, IT services, consulting services, and so on. Find everything you need to know to launch your independent career, become a better freelancer, and get more freelance jobs!

3. [https://worldreferendums.allbestico.com/](https://worldreferendums.allbestico.com/) - We Are World Referendums WR Token! Here You Can Initiate A Referendum In A Few Minutes. We Help Democracy through Blockchain Technology! *(In the process of improvement)*

4. [https://allbicash.allbestico.com/](https://allbicash.allbestico.com/) - ALLBI Cash is the future of payments in the ALLBESTICO Family! With ALLBI Cash you can pay for any project created by the ALLBESTICO Family! *(In the process of improvement)*

5. Expect new projects in 2021! All ALLBI owners will receive part of all New Tokens free - which we will listing in 2021!
I. ABSTRACT

SUMMARY

**ALLBESTICO (ALLBI)** is a cryptocurrency based on the Ethereum blockchain which belongs to a class of ERC20 token standard. The ERC20 token standard describes the functions and events that an Ethereum token contract has to implement.

ERC20 is a technical standard used for smart contracts on the Ethereum blockchain for implementing tokens. ERC stands for Ethereum Request for Comment, and 20 is the number that was assigned to this request. The clear majority of tokens issued on the Ethereum blockchain are ERC20 compliant.

ERC20 defines a common list of rules for Ethereum tokens to follow within the larger Ethereum ecosystem, allowing developers to accurately predict interaction between tokens. These rules include how the tokens are transferred between addresses and how data within each token is accessed.

ERC20 defines a set of rules which need to be met in order for a token to be accepted and called an 'ERC20 Token'. The standard rules apply to all ERC20 Tokens since these rules are required to interact with each other on the Ethereum network. These tokens are blockchain assets that can have value and can be sent and received, like Bitcoin, Litecoin, Ethereum, or any other cryptocurrency.

The difference between these tokens and a standalone currency like Litecoin is that ERC20 tokens piggyback on the Ethereum network, hosted by Ethereum addresses and sent using Ethereum transactions.

This Whitepaper intends to give a brief and general outline about the usability of this new digital asset called ALLBI and how any member of the public can participate and earn ALLBI. In this paper will explore how ALLBI will function as an alternative cryptocurrency, the products and services and rewards available through the ecosystems associated with ALLBI, the technical information of the product/digital asset (software specifications) named ALLBI, and how ALLBI is designed to provide a better experience for cryptocurrency users.
II. INTRODUCTION

What is ALLBI?

ALLBI is the first consumer-oriented cryptocurrency launched in the U.K. and Bulgaria by LEX PARTNERS LTD, company which supports ALLBI. ALLBI works just like Bitcoin, but removes mining for profit. ALLBI aims to virtually eliminate mining for profit – the aspect of cryptocurrencies responsible for harming the environment, through wastage of electricity. The coins are stored on computers and transferred over the internet between digital “wallets-profile”.

You can pay a certain amount of Ethereum (ETH) until 31/12/2019 or with ALLBI Tokens afterwards according to Phase I to III (prices are listed on the site and in your account) to create for your own CRYPTOCURRENCY. ALLBI is a digital asset.

With the development of our system, you will be able to:

● create your own crypto projects

● use your ALLBI Tokens to make payments to other projects created on our system;

● to sell your ALLBI Tokens to other peers directly from your profile

● without using intermediaries or having commissions;

Of course you will also be able to sell your ALLBI tokens on different cryptocurrency exchanges!

*Ethereum (ETH) Address and Phase I to III can be found on the last page!
WHAT IS CRYPTOCURRENCY?

Cryptocurrencies are digital systems (protocols) for exchanging value between participants on a decentralised computer network. Bitcoin (BTC) is the most famous and widely-adopted cryptocurrency.

Most cryptocurrencies use hard-to-solve cryptographic puzzles called “Proof of Work” to secure the operation of the network. The process of verifying the cryptographic solutions is commonly referred to as “mining”. Bitcoin introduced a “reward” system, where the miner who solves a block is awarded a small amount of the cryptocurrency. This reward compensates the miner for contributing their hardware and electricity to the mining network.

The solution of a block is a vital operation to allow distributed consensus and add the block to the blockchain.

Technology-rooted movements like Bitcoin have demonstrated, through the power of the default, consensus mechanisms, and voluntary respect of the social contract, that it is possible to use the internet to make a decentralised value-transfer system, shared across the world and virtually free to use. This system can be said to be a very specialised version of a cryptographically secure, transaction-based state machine.

What is the difference between Cryptocurrency and ALLBI?

Cryptocurrencies like BitCoin are based on technology called mining for distribution of token, where ALLBI is a new type of cryptocurrency (tokens), built on the basis of Ethereum technology.

It offers maximum convenience, maximum security, and involves no bureaucracy. Anyone can review the contract of the currency via a link - TxHash: https://etherscan.io/tx/0xcc6cc3d08b0ddbfbb09cafd111079f743acdf4dc9ef2a4097e7f2e43e5bc32e
BENEFITS

On traditional server architectures, every application has to set up its own servers that run their own code in isolated silos, making sharing of data hard. If a single app is compromised or goes offline, many users and other apps are affected. On a blockchain, anyone can set up a node that replicates the necessary data for all nodes to reach an agreement and be compensated by users and app developers. This allows user data to remain private and apps to be decentralised like the Internet was supposed to work.

♦ Our customer support NEVER communicates via direct messages on Telegram. Beware of scammers that may impersonate our teammates.

♦ In order to ensure the security of your assets, please DO NOT disclose your account ID, password, verification code or any other personal information.

Divide your funds into two types of investments. The first type represents money you can afford to lose, and the second contains money you can't afford to lose.

For example, you might have a tolerance for losing a few hundred dollars left over from a tax refund or payments for overtime at work. On the other hand, you might have savings that you will depend on for your retirement income, and you can't afford to lose any of it. You will find it useful to divide your money so you remain absolutely clear about which portion you can't risk.

"Don't invest more than you can afford to lose."
