I. ABSTRACT

SUMMARY

ALLBESTICO (ALLBI) is a cryptocurrency there are two based blockchains on the Ethereum which belongs to a class of ERC20 token standard (old) and Binance Smart Chain (BEP-20) (NEW). ALLBI will switch fully to BSC when all updates and SWAPs are performed. At the moment your tokens are protected no matter which blockchain they are on, we will replace all your tokens with the new BEP-20. The official Smart Contract is: https://bscscan.com/token/0x19178ecef9cf2dc3f2dcf2ec9eb0b68d4bd92592806a

Total Supply: 666,000,000 ALLBI (BEP-20)

ERC20 is a technical standard used for smart contracts on the Ethereum blockchain for implementing tokens. ERC stands for Ethereum Request for Comment, and 20 is the number that was assigned to this request. The clear majority of tokens issued on the Ethereum blockchain are ERC20 compliant.

Binance Smart Chain (BSC) has been booming with activity. Ranging from token swaps to decentralized money markets and cute NFTs, there are many options to earn yield or simply to have fun.

But what do you need to get started, and how do you do it? We’ll go through it all in this Whitepaper.

This Whitepaper intents to give a brief and general outline about the usability of this new digital asset called ALLBI and how any member of public can participate and earn ALLBI. In this paper will explore how ALLBI will function as an alternative cryptocurrency, the products and services and rewards available through the ecosystems associated with ALLBI, the technical information of the product/digital asset (software specifications) named ALLBI, and how ALLBI is designed to provide a better experience for cryptocurrency users.
II. INTRODUCTION

What is ALLBI?

ALLBI is the first consumer-oriented cryptocurrency launched in the U.K. and Bulgaria by LEX PARTNERS LTD, company which supports ALLBI. ALLBI works just like Bitcoin, but removes mining for profit. ALLBI aims to virtually eliminate mining for profit – the aspect of cryptocurrencies responsible for harming the environment, through wastage of electricity. The coins are stored on computers and transferred over the internet between digital “wallets-profile”.

You can pay a certain amount of Ethereum (ETH) until 31/12/2019 or with ALLBI Tokens afterwards according to Phase I to III (prices are listed on the site and in your account) to create for your own CRYPTOCURRENCY. ALLBI is a digital asset.

With the development of our system, you will be able to:

● create your own crypto projects

● use your ALLBI Tokens to make payments to other projects created on our system;

● to sell your ALLBI Tokens to other peers directly from your profile

● without using intermediaries or having commissions;

Of course you will also be able to sell your ALLBI tokens on different cryptocurrency exchanges!

*ALLBESTICO (ALLBI) Address and Phase I to III can be found on the last page!
WHAT IS CRYPTOCURRENCY?

Cryptocurrencies are digital systems (protocols) for exchanging value between participants on a decentralised computer network. Bitcoin (BTC) is the most famous and widely-adopted cryptocurrency.

Most cryptocurrencies use hard-to-solve cryptographic puzzles called “Proof of Work” to secure the operation of the network. The process of verifying the cryptographic solutions is commonly referred to as “mining”. Bitcoin introduced a “reward” system, where the miner who solves a block is awarded a small amount of the cryptocurrency. This reward compensates the miner for contributing their hardware and electricity to the mining network.

The solution of a block is a vital operation to allow distributed consensus and add the block to the blockchain.

Technology-rooted movements like Bitcoin have demonstrated, through the power of the default, consensus mechanisms, and voluntary respect of the social contract, that it is possible to use the internet to make a decentralised value-transfer system, shared across the world and virtually free to use. This system can be said to be a very specialised version of a cryptographically secure, transaction-based state machine.

What is the difference between Cryptocurrency and ALLBi?

Cryptocurrencies like BitCoin are based on technology called mining for distribution of token, where ALLBi is a new type of cryptocurrency (tokens), built on the basis of Ethereum (ERC20) technology and Binance Smart Chain (BEP-20).

It offers maximum convenience, maximum security, and involves no bureaucracy. Anyone can review the contract of the currency via a link:

BENEFITS

On traditional server architectures, every application has to set up its own servers that run their own code in isolated silos, making sharing of data hard. If a single app is compromised or goes offline, many users and other apps are affected. On a blockchain, anyone can set up a node that replicates the necessary data for all nodes to reach an agreement and be compensated by users and app developers. This allows user data to remain private and apps to be decentralised like the Internet was supposed to work.

♦In order to ensure the security of your assets, please DO NOT disclose your account ID, password, verification code or any other personal information.

Divide your funds into two types of investments. The first type represents money you can afford to lose, and the second contains money you can't afford to lose.

For example, you might have a tolerance for losing a few hundred dollars left over from a tax refund or payments for overtime at work. On the other hand, you might have savings that you will depend on for your retirement income, and you can't afford to lose any of it. You will find it useful to divide your money so you remain absolutely clear about which portion you can't risk.

"Don't invest more than you can afford to lose."
